

Summer Bingo

Hot and bright summers can be a good time to notice many creatures and plants around us. You can spot skins and garden lizards basking or watch animals play and keep cool in small pools of water. Summer is also a time for juicy and refreshing fruits to help us beat the summer heat. Look out from your window or take a walk around your neighborhood- find any 3 down or across and say Bingo! Use the extra space in each box to make a note of the date, time of day, place where you made these observations.

My Observations

Something new I am noticing this season:

Something that I can no longer spot at this time:

Changes in my food, clothing and other practices:

animals basking

birds circling overhead

fruiting tree with ripe fruit

spiders inside your home/school

dry grass? look again! grass or grasshopper

animals keeping themselves cool

seeds flying or floating in the wind

an insect visiting a flower

a line of ants

Activity: Seeds that travel

Have you seen seeds flying or being carried by the wind? How do they fly? Are there other ways that seeds travel from one place to another? Why do you think seeds need to go to different places? If you were a seed how would you like to travel? Write and draw a comic strip that shows your journey.
